SET 1

MORADABAD INSTITUTE OF TECHNOLOGY

DEPARTMENT OF COMPUTER SCIENCE & ENGINEERING

CLASS TEST – 1

Course: B.Tech
Session: 2025-26
Subject: Python Programming
Max. Marks: 20

Semester: 4th
Section: A, B, C, D
Subject Code: BCC402
Time: 1 Hour

Q. No. :	1	2	3	4	5	6
CO No. :	CO 1	CO 2	CO 3	CO 1	CO 2	CO 3
Bloom's Level	K1	K2	K2	K2	K2	K2

CO1: Interpret the fundamental Python syntax and semantics and be fluent in the use of Python operators, Data Types.
CO2: Express proficiency in the handling of Python flow control conditional blocks.
CO3: Determine the methods to create and manipulate Python programs by utilizing the data structures like lists, dictionaries, tuples and sets, strings.

		Marks
Section (A) Attempt all questions.		
1)	What are Python Variables? Give an example of declaring numeric data types.	(2)
2)	Differentiate between for loop using range function and while loop.	(3)
3)	Explain string slicing with example.	(3)
Section (B) Attempt all questions.		
4)	Explain Python basic operators. Write a program to check if a number is even or odd using if-else.	(4)
5)	Explain Loop manipulation statements using break, continue, pass. WAP to print the sum of first 10 natural numbers.	(4)
6)	Discuss string built-in functions. Write a program to count number of vowels in a string.	(4)

SET 1

MORADABAD INSTITUTE OF TECHNOLOGY

DEPARTMENT OF COMPUTER SCIENCE & ENGINEERING

CLASS TEST – 2

Course: B.Tech
Session: 2025-26
Subject: Python Programming
Max. Marks: 20

Semester: 4th
Section: A, B, C, D
Subject Code: BCC402
Time: 1 Hour

Q. No. :	1	2	3	4	5	6
CO No. :	CO3	CO4	CO5	CO3	CO4	CO5
Bloom's Level	K2	K4	K4	K3	K3	K2,K3

CO3: Determine the methods to create and manipulate Python programs by utilizing the data structures like lists, dictionaries, tuples and sets, strings.
CO4: Identify the commonly used operations involving file systems and regular expressions.
CO5: Articulate the Object-Oriented Programming concepts and python packages like: matplotlib,Numpy,Pandas,Tkinter libraries.

		Marks
	Section (A) **Attempt all questions.**	
1)	Explain difference between list and tuple in Python.	(2)
2)	Differentiate read (),readline() and readlines() with an example of each.	(3)
3)	Distinguish arange() and linspace() of Numpy with an example.	(3)
	Section (B) **Attempt all questions.**	
4)	Demonstrate the use of any 5 inbuilt functions of dictionary in python. Also, write a program to concatenate two dictionaries using loop.	(4)
5)	Write a Python program to copy the content of one file, file1.txt, to another file, file2.txt.	(4)
6)	Explain the use of matplotlib for data visualization. Write a program to visualize Line plots using these data. x = [1, 2, 3, 4, 5] y = [10, 20, 25, 30, 40]	(4)

SET 2

MORADABAD INSTITUTE OF TECHNOLOGY
DEPARTMENT OF COMPUTER SCIENCE & ENGINEERING
CLASS TEST – 1

Course: B.Tech
Session: 2025-26
Subject: Python Programming
Max. Marks: 20

Semester: 3rd
Section: I,J,E,F,G,H
Subject Code: BCC302
Time: 1 Hour

Q. No. :	1	2	3	4	5	6
CO No. :	CO 1	CO 2	CO 3	CO 2	CO 3	CO 3
Bloom's Level	K1,K2	K1,k2	K3	K2	K3	K3

CO1: Interpret the fundamental Python syntax and semantics and be fluent in the use of Python operators, Data Types.
CO2: Express proficiency in the handling of Python flow control conditional blocks.
CO3: Determine the methods to create and manipulate Python programs by utilizing the data structures like lists, dictionaries, tuples and sets, strings.

		Marks
Section (A) **Attempt all questions.**		
1)	Describe basic Python Operators with suitable examples.	(2)
2)	Write a Python program to check the given number is even or odd using if and else statement.	(3)

3)	Which of the following statements produce an error in Python?
	x, y, z = 1,2,3 #s1
	s1 a, b = 4,5,6 #s2
	u = 7,8,9 #s3
	(List all the statements that have error.)
		(3)

Section (B) **Attempt all questions.**		
4)	Explain Type conversion with example. Discuss why python is an interpreted programming language. Explain features of python while comparing Python 2.0 and Python 3.0	(4)
5)	What are break, continue and pass statements. Give example.	(4)
6)	Explain string slicing and string operations in Python.	(4)
